FORMAT DETAILS

4K RAW	4096x2160, 10-bit linear data, recorded as Uncompressed .RMF
4K Half RAW	4096x2160, 10-bit linear data, where every other line is sampled by the camera sensor, for faster frame rate support, recorded as Uncompressed .RMF
QHD	3840x2160, 10-bit linear data, recorded as Uncompressed .RMF
2K 12-BIT DPX*	2048x1080, 12-bit log 4:4:4 RGB video, recorded as Uncompressed .DPX
HD 12-BIT DPX*	1920x1080, 12-bit log 4:4:4 RGB video, recorded as Uncompressed .DPX
2K 10-BIT DPX*	2048x1080, 10-bit log 4:4:4 RGB video, recorded as Uncompressed .DPX
HD 10-BIT DPX*	1920x1080, 10-bit log 4:4:4 RGB video, recorded as Uncompressed .DPX
HD 422 DPX	1920x1080, 10-bit log 4:2:2 video, recorded as Uncompressed .DPX
HD Apple ProRes	1920x1080, 10-bit log video, recorded as Apple ProRes 422 (HQ) compressed HD video

* HD DPX files at 60p are "packed" on SSDs due to high data rate. Use free CD Data Unpacker utility software to unpack files after transfer.

** Two SSDs are required to capture

TYPICAL DOWNLOAD TIME IN MINUTES

Media	USB3.0	Thunderbolt
256G SSD	20	10
512G SSD	40	20

Actual transfer rates are dependent on computer system and capture media.

USB 3.0 or Thunderbolt connections are recommended by Convergent Design for efficient data rates.

Connect C500 3G-SDI output to Odyssey7Q SDIA input

Note: Use only 3G-SDI rated cables from C500 to Odyssey 7Q. Using a 1.5G SDI cable is not recommended and may cause issues.

The status on your Odyssey7Q will display your camera's output.

Example:

4K 29.97p S-LOG2	4K->HD PRORES
---------------------	------------------

Note: The recorded file will be 1920x1080 @ 23.98/25/29.97 fps.

Recording Across Two SSDs

SSD1	SSD2
1, 3, 5, 7...	0, 2, 4, 6...

4K 50/59p and 100/120p = RAID (two drives)

Note: You can use any Convergent Design media; they need not be matching (ie, one 256GB card and one 512GB card). Data recorded will be equal to the lower capacity SSD.

(Next Step: Off-loading Data)

Notes

1 Connect SSD Drive to Adapter

Connect the Convergent Design 2.5" Premium SSD Media to any off-the-shelf 2.5" SATA adaptor (example: Seagate GoFlex Thunderbolt Adaptor or USB 3.0 Adaptor)

2 Connect Adapter to Computer

The SSD will mount within 10-20 Seconds. (You will see this mount on the desktop or within finder on MAC, or within My Computer on Windows machines).

3 Copy Files for Playback/Editing

All Clips or Takes are located within the "Clips" directory, navigate to this and copy all of your files to a local or external drive or RAID for playback and/or editing.

Free Software Utilities

CD Clip Merger *(Free Download from Website)*

Use the Clip Merger for any Raided Record (ie if your recorded clip required more than one SSD). See the *At A Glance Chart*, "No. of SSD's Req" column, on page 2.

CD Apple ProRes 422 File Transfer Tool *(Free Download from Website)*

Use to combine each clip into a single file

CD Data Unpacker *(Free Download from Website)*

Use CD Data Unpacker to convert "packed" files to "unpacked" data.

DOWNLOAD HERE: <http://convergent-design.com/support/firmware-downloads.html>

ATTENTION MAC OSX USERS

Before installing Convergent Design Software on Mac OSX You must first change the following settings.

- 1) Navigate to **Applications » Utilities » System Preferences**
- 2) Select **Security and privacy**
- 3) Under **General » Allow applications downloaded from:** Select **Anywhere.**
- 4) Now you will be able to run the installer for installing any Convergent Design Applications.

UNCOMPRESSED SUPPORT (DPX SEQUENCE)

All Uncompressed recording on the Odyssey 7Q is recorded as 10 bit RGB 4:4:4 DPX. This is for all sources regardless if the source is 8 bit, 10 bit, 4:2:2, 4:4:4. With 12 bit cameras, files are recorded as a 16 bit DPX for more universal compatibility. Also note that with DPX files timecode, and Clip Metadata is stored in every frame, as well as in the XML file within each clip. All audio is recorded 48Hz 16 bit Uncompressed Wav audio.

Also Note 1080p59.94/60p, 1080p119/120 and 12 bit files are recorded as Packed, so our CD Unpacker Utility will need to be used before the files can be used in any editor.

Native 10-bit / 16-bit DPX Support

Adobe CS6 / Adobe C5CC	Black Magic DaVinci Resolve	Grass Valley Evis (Does not support 16-Bit)
Apple Color	Cineform Studio	The Foundry Nuke
AutoDesk Smoke	ColorFront OnSet Dailies	Xnview(Does not support 16-Bit)
Assimilate Scratch Lab	DJViewer	
Avid DS	Eyeon Fusion	

Plugins for DPX Support

Glue Tools	Apple FCP Pro
	Apple FCP Pro X
Meta Fuse	Avid Media Composer

2K / 1080P 12 BIT RECORDINGS IN DAVINCI RESOLVE 11*

Generating a LUT and applying it as an input lut should help fix the issue. Here is how it can be done:

1. Add a single DPX sequence to a new project and create a timeline
2. In the color page, go to the RGB Mixer and swap the red and blue channels
3. Right click on the VSR of the Clip and generate a LUT. Save the LUT in the default location or in a sub folder then open the project with the DPX files that exhibit the issue. Apply the saved LUT as an input LUT.

* If using Resolve 10 or older, or other NLE's such as Adobe, Scratch Lab, or Autodesk Smoke, then you can simply import the DPX files after running through the data unpacker.

Apple ProRes 422 (HQ)

The Odyssey7Q records in Apple ProRes 422 (HQ) which is a 10 bit 4:2:2 220Mb compressed codec. This will allow for high quality recording while avoiding high data rates of working with uncompressed video. (DPX)

Native Apple ProRes 422 Support

Adobe CC 2014*	Final Cut Pro 7	Autodesk Smoke
Apple FCP X, Aperture	Black Magic DaVinci Resolve	Sony Vegas
Cineform Studio	The Foundry Nuke	

To playback Apple ProRes 422 (HQ) files in QuickTime Player X, the files must be first run through our Apple ProRes 422 (HQ) Utility to be optimized for the recently released Apple ProRes 422 (HQ) Codec update. If files are not optimized, then they will play the first second of audio only. This is not an issue when playing in FCPX.

Importing C500 RAW Files

FCP X IMPORT SETTINGS

Once you have created a new project be sure to check the following Settings:

1. Under **Final Cut Pro** select **Preferences**
2. Be sure the **Still Images** editing duration is set to **0.0.1 Seconds**
3. Select navigate to **File** and select **Import Media**
4. Navigate to the **Clips directory**, and select the **Clip Folder** contain your **RAW files**.
5. At this point you can start correcting the files to a 2.2 Gamma. using the **Color Board**.

** Note if you are recording the the internal media you can import the matching Slog2 file, and select **Match Color** for a close approximation of Slog2, but will most likely need additional tweaking.*

CANON C500 4K RAW SUPPORT

All Canon C500 4K recording on the Odyssey 7Q is recorded as 10 bit Cinema RAW file. Also note that with RMF files timecode, and Clip Metadata is stored in every frame, as well as in the XML file within each clip. All audio is recorded 48Hz 32 bit Uncompressed Wav audio.

It is important to correctly set the white balance of the camera, as this is baked into the RAW file.
